

10 steps to mixing with Hercules Mobile DJ MP3

1 Make sure you've got music stored on your PC (iTunes, MP3 library...). Insert the installation CD and when you're prompted to do so, plug the receiver + mini-cable into the PC's USB port.

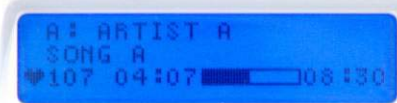

2 The Hercules Mobile DJ Mix software prompts you to import your music library: either your iTunes library or other files stored on your PC. You will use these files to mix.

3 On the Hercules Mobile DJ MP3 controller, set the power switch to **On**. Position the controller very close to the USB receiver and press any button on the controller. The screens light up!

4 Scroll the left wheel to choose the song you want to load on Deck A. Deck A is the left half of the controller (Deck B is the right half).

All your song titles are displayed on the upper LCD screen: click the wheel to select one. Do the same with the right wheel to load a track on Deck B.

Line 1: Artist (+ mixing mode or effects)

Line 2: Song title

Line 3: BPM, position in the song, total duration

5 Press the left Play/Pause button to play the song on Deck A. Control the volume with the fader (1). Don't forget to move the central fader/cross fader (2) to the left.

10 steps to mixing with Hercules Mobile DJ MP3

6

You can immediately add **funny effects** by pressing the **1/2/3/4 buttons** (on Deck A): applause, loops, explosions...! Press the 1/2/3 or 4 buttons again to stop the effect.

You can even do some **scratching**. Press the **Tune/Scratch** button. Move the jog wheels for scratch effects. Press the **Tune/Scratch** button again to stop the scratch function.

7

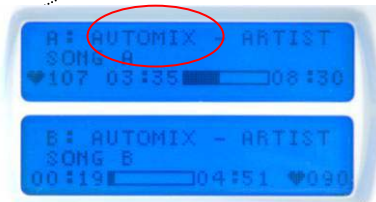

To **mix** the song playing on Deck A with the other song loaded on Deck B, press the **Sync** button on Deck B (right-hand side), to synchronize the BPM (Beats Per Minute) of the 2 tracks. The secret to great mixing is 2 songs with close BPM, to help dancers keep dancing to the same beat!

Press the Play/Pause button on Deck B to start playing song B and move the cross fader progressively from left to the right, to go from song A to B. Move up the volume on Deck B. You've done your first mix!

8

When the song is playing, just press the **Automix** button. This function will automatically mix your current list of songs (using beat-matching where possible), randomly...

9

On the Mobile DJ MP3, the small buttons **Music**, **Library** and **Playlist** respectively access your music library in the Hercules Mobile DJ Mix software (browse by genre and artist), an explorer for your computer (as well as your library in the Mobile DJ Mix software), and playlists you've created.

10

Last step: Have a closer look at the **Hercules Mobile DJ Mix** software on your PC to discover all of the included functions: drag and drop songs to Deck A or B, either on the Beat screen (beats are represented by vertical bars as waves) or jog wheels. Change the effects, right-click to discover the other effects available...
